

## Research Profile

I design and build **interactive AI systems for health and well-being**, pursuing **human-AI co-sensemaking**: keeping people the authors of what they come to understand, rather than recipients of what a model concludes. Working across **multimodal sensing**, **interactive visual analytics**, and **generative AI**, I build systems that let individuals and domain experts question, revise, and own the interpretations they act on. My research lies at the intersection of **Ubiquitous Computing (UbiComp)**, **Human-Computer Interaction (HCI)**, and **Health Informatics**.

**Keywords:** Human-AI Co-Sensemaking, Multimodal Health Sensing, Generative AI Systems, Clinical Decision Support, Interactive Visual Analytics, Digital Well-being
