

Research Profile

I design and build **interactive AI systems for health and well-being**, pursuing **human-AI co-sensemaking**: a bidirectional process in which AI helps people interrogate and interpret their health data while they, in turn, shape the system's understanding of their context and goals. By integrating **multimodal sensing**, **interactive visual analytics**, and **generative AI**, I aim to bridge the gap between data-driven insights and evidence-informed action for experts and individuals. My research lies at the intersection of **Ubiquitous Computing (UbiComp)**, **Human-Computer Interaction (HCI)**, and **Health Informatics**.

Keywords: Human-AI Co-Sensemaking, Multimodal Health Sensing, Generative AI Systems, Clinical Decision Support, Interactive Visual Analytics, Digital Well-being
